In order for the Controls System to play Test Shows, the Test Shows need to be configured exactly like a Regular Show.

- On the iPad, go to the **Playlist Settings** screen and Start a Show Scanner. Increase the **"SCAN UP TO"** number (use 105) to let the server scan and record information for all the shows.

NOTE: The server has to **"open"** all shows one after the other for a few seconds in SPM in order to grab the name and duration.

- Wait for the countdown to reach 0.
- Tap on the **"DESIGNATE TEST SHOWS"** button on the same Playlist screen and a popup will appear with all the shows the Server was able to **OPEN**.
- Selecting a show will turn the name green. Green names mean Test Show.
- Click on **DONE** to save all these selected shows on the server as the Test Shows.

All scanned shows will be available to play from the Show List screen.

IMPORTANT:

Selecting a show as a Test Show **will hide it** from being scheduled on the Playlist and Scheduler screens.
